

## DESTRULIMP

DESCALING PRODUCT TO UNBLOCK PIPES

Product specially designed to clean the organic and inorganic remainders which usually accumulate inside the drainpipes and pipes. It dissolves cellulose, weaves, cotton, cardboard, compresses, hair, greases, mud, slush, etc.

### USES

Owing to its characteristics the product is essential to eliminate organic or inorganic residues in drainpipes, toilets, baths, etc.

### SURFACE PREPARATION

If the obstruction is after the U-bend it will be much more effective to put a plastic tube until we find the blockage, because the product acts very fast.

### INSTRUCTIONS FOR USE

1. Put some water into the pipe.
2. Pour the product directly into the drain pipe (without water addition).
3. Let the product act until it dissolves the blockage (5 or 10 minutes).
4. Once the blockage is out, clean the pipe with a lot of water.

## CONSUMPTION

It will depend on the place and the residue to eliminate.

## COLOURES

Colourless.

## PACKING AND STORING

Destrulimp is packed in hermetic boxes of 12-24 Units (in hermetic 1 litre bottles), according to EC packing and storing directives for chemical products.

## HYGIENE AND SAFETY

See product label.
